HANA 1.1.2 Release Notes

- New Features
- Toolkit Installation
- Migration and Compatibility
 - Supported DBMS Versions
 - Supported Operating Systems
- Supported Operating Systems
 - Red Hat Enterprise Linux (RHEL)
 - SUSE Linux Enterprise Server (SLES)
 - Delphix Engine Toolkit Compatibility
 - Unsupported HANA Versions and Features
- Known Issues

New Features

Delphix now supports HANA 2.0 SP02 MDC environments (SYSTEM DB with single tenant).

Toolkit Installation

Toolkits to support HANA virtualization are not automatically included in the Virtualization Engine deployment and are installed by Delphix Professional Services or Technical Support. A Support case can be opened requesting installation by following this [link](#).

Migration and Compatibility

Supported DBMS Versions

- HANA Platform Edition 1.0 SP12
- HANA Platform Edition 2.0 SP02

Supported Operating Systems

- Red Hat Enterprise Linux (RHEL)
- S.u.S.E Linux

Supported Operating Systems

- 64-bit OS support only
- Support for x86-based systems only

Red Hat Enterprise Linux (RHEL)

	HANA 1.0 SPS12	HANA 2.0 SP02
Supported DBMS Version		
Supported OS Version		
RHEL 7.0	Supported	Not Supported
RHEL 7.1	Supported	Not Supported

RHEL 7.2	Supported	Supported
RHEL 7.3	Supported	Supported

SUSE Linux Enterprise Server (SLES)

	HANA 1.0 SPS12	HANA 2.0 SP02
Supported DBMS Version		
Supported OS Version		
SLES 12 SP3	Supported	Supported

Delphix Engine Toolkit Compatibility

Delphix Engine Version	HANA_1.0 SPS 12	HANA 2.0 SP02
5.1.x	No	No
5.2.2.x	No	No
5.2.3.x	No	No
5.2.4.x	Yes	No
5.2.5.x	Yes	No
5.2.6.x	Yes	Yes

Unsupported HANA Versions and Features

- V2P is not supported with this release.
- If the logs creation process has been disabled explicitly then the replication will not work.
- XSEngine should not be installed on the HANA DB.
- HANA License should be installed on source.
- Delphix Self-Service is not supported with 1.1.2 toolkit release.

Known Issues

Key	Summary	workaround/Comments
CTCHANA-692	If there are two VDBs present in the Delphix Engine, where one is incorrect and the other one is correct, then on deleting the incorrect VDB, the correct VDB will also be stopped.	On the target host delete the vdb_exists file from the path below: HANA_Installation_path/HANA_SID/global/hdb/custom/config
CTCHANA-693	Correct VDB will stop if we delete incorrect VDB from Delphix Engine.	Start the VDB again.
CTCHANA-678	No Error message is observed when trying to create a VDB with a special character.	Remove the special character and proceed with VDB creation.
