HANA 2.0 Plugin Release Notes

Features

The HANA 2.0 Plugin (version 3.4.2) enables the virtualization of the HANA 2.0 database. Here are few more details on the plugin:

- Virtualization of individual tenant databases instead of entire system
- Ability to mix and match virtualized tenants across any HANA system
- Support for Delphix initiated backup ingestion (Delphix takes the backups) as well as external backup ingestion (you provide already taken backups).
- Only support HANA Native Backups (no support for 3rd party Backint based backups)
- No formal requirement for a staging target host

Support Matrix

Supported DBMS Versions

The HANA 2.0 Plugin is supported against the following HANA releases:

| HANA Version (Express, Platform & Enterprise Editions) | Support Package Stack (SPS) | Supported |
|--|-----------------------------|-----------|
| 2.0 | 03 | Yes |
| 2.0 | 04 | Yes |

 **Important:** A target may have a higher SPS release than a source; the reverse is not supported.

Supported Operating Systems :

The HANA 2.0 Plugin has been certified against the following SUSE and RHEL releases.

| Supported DBMS Version | Supported OS Version | |
|------------------------|---|---|
| | HANA 2.0 SPS 03 (Express, Platform & Enterprise Editions) | HANA 2.0 SPS 04 (Express, Platform & Enterprise Editions) |
| RHEL7.2 | Supported | Supported |
| RHEL7.3 | Supported | Supported |

| | | |
|------------------|-----------|-----------|
| RHEL7.4 | Supported | Supported |
| SUSE 12 SP 03 | Supported | Supported |

Known Issues
