EBS 12.1 Plugin 2.3.0 Release Notes

New Features

EBS Plugin version 2.3.0 introduces a new feature where EBS appsTier provision wizard would have a checkbox to control the start/stop of EBS services during provision operation.

Plugin Installation

Plugins to support EBS virtualization are not automatically included in the Virtualization Engine deployment and are installed by Delphix Professional Services or Technical Support. A Support case can be opened requesting installation by following this [link](#).

Migration and Compatibility

Oracle SI dbTechStack and Database

EBS 12.1

- Oracle11gR2 v11.2.0.4
- Oracle12cR1 v12.1.0.2

 Oracle does not yet support the multi-tenant option for E-Business Suites, so Delphix cannot support this either.

Oracle EBS appsTier

- Single-node appsTier
- Multi-node appsTier with shared APPL_TOP

 The Delphix Engine does not provide support for provisioning a multi-node appsTier where the APPL_TOP is not shared between nodes.

Supported Operating Systems

- Linux – SLES 9, 10, 11; RHEL 5, 6, 7, OL 5, 6
- Solaris – SPARC 9, 10, 11
- Advanced Interactive eXecutive (AIX) – See the matrix at the bottom of [Oracle E-Business Suite Support Matrix](#).

Key points

- Plugin 2.3.0 now also supports IDEA-1705: EBS appsTier provision wizard should have checkbox to start EBS services.
- Plugin 2.3.0 also will continue to support sudo privileges for virtualizing EBS appsTier only for EBS 12.1 customers.
- Customers can skip a patch plugin release upgrade if they intend to upgrade their plugin to a higher version. The Delphix Engine ignores patch versions when handling plugin upgrade logic. It only validates the major/minor plugin version during the plugin upgrade.
